# Introduction to Mains-Fed Water Coolers

- ✓ **Unlimited Water Supply**  
Clean, natural water at the touch of a button.
- ✓ **Ideal Water Temperature**  
Ambient, cold or hot - you choose.
- ✓ **Clean and Pure**  
We use state-of-the-art carbon filtration for great tasting water.
- ✓ **Environmentally Conscious**  
Plumbed-in, mains-fed water coolers are energy-efficient and environmentally friendly.
- ✓ **Stylish and Modern**  
A range of designs from basic to premium to suit any workplace and budget.
- ✓ **Simple Pricing**  
One regular fee - unlimited water supply.
- ✓ **Professional Installation**  
Plus, regular sanitisation carried out by our certified Cooler Experts.

Does your workplace need access to **unlimited, great-tasting water on demand?**

If so, our Mains-Fed water coolers are the answer. And they're great if you're looking for a fixed cost too. Mains-Fed water coolers take the water from your existing mains water supply and use a high-quality filter to transform mains water into fresh, great-tasting drinking water free from contaminants and chlorine.

**Sanitisation is not the daily cleaning of your Water Cooler...**

Every 6 months a BWCA (British Water Cooler Association) trained Eden Kafevend cooler expert will change your cooler filter and sanitise your water cooler, thoroughly cleaning it inside and out. This is automatically scheduled by our team.

**Sanitisation visits are scheduled Monday to Friday.**

## Install Rail

All our Mains-Fed Water Coolers are professionally installed using our install rail connector as standard.

This offers that extra protection and features:

- A Double check non return valve** - Acts as an isolator and prevents back flow
- B Pressure reducing valve** - Controls the water pressure ensuring consistency
- C Water block** - Leak detector to ensure constant water flow - if the flow becomes too heavy, then it is assumed there is a leak and the water block activates, shutting off the water flow
- D Water block reset button** - Used to reset the water block which can cancel water flow if activated in error
- E Pipe to cooler adapter** - Connects the cooler water pipe to the Install Rail
